Testi del Syllabus

Resp. Did. CESCA FABRIZIA Matricola: 031484

Docenti CESCA FABRIZIA, 3 CFU LEGNAME GIUSEPPE, 3 CFU MANGANOTTI PAOLO, 3 CFU

Anno offerta: 2023/2024
Insegnamento: 970SV - NEUROPATHOLOGY
Corso di studio: SM75 - NEUROSCIENCE
Anno regolamento: 2023
CFU: 9
Settore: BIO/09
Tipo Attività: B - Caratterizzante
Anno corso: 1
Periodo: Secondo Semestre
Sede: TRIESTE

Testi in italiano

Lingua insegnamento English

Contenuti (Dipl.Sup.) The Neuropathology course combines core teaching of fundamental aspects of major neuropathological diseases, with emphasis on the cellular and molecular causes of neurodegeneration and their clinical presentation, and on the role of glial cells in neurodegenerative pathologies and disorders of cognition. The course will also address how hypotheses can be tested in relevant model systems and used to develop novel therapeutic strategies. The course contents will be organized in three modules, as follows:

Astroglia Neuropathology, Prof. F. Cesca, 3 CFU
Molecular Neuropathology, Prof. G. Legname, 3 CFU
Clinical Neuropathology, Prof. P. Manganotti, 3 CFU

Aminoff MJ. Neurology and General Medicine, Churchill and Livingstone, 7 Ed.
Favale e Loeb: Neurologia di Fazio - Loeb
Ropper e Brown: Neurology
Angelini-Battistin: Neurologia Clinica
Victor e Adams: Principi di Neurologia
Wilkinson-Lennox: Essential Neurology -Blackweel Publishing

CD, articoli e review su specifici argomenti verranno forniti durante le lezioni. Verrà fornito anche il materiale (es. diapositive) utilizzato durante il corso.

linguaggio tecnico, limitata capacità di applicare in modo adeguato le conoscenze teoriche a casi concreti.

- Insufficiente: lo/la studente/essa non possiede una conoscenza accettabile dei contenuti dei diversi argomenti del programma.

**Programma esteso**

Astroglial Neuropathology (Prof. F. Cesca):

Molecular Neuropathology (prof. G. Legname): Molecular mechanisms in neurodegeneration; Prion diseases; Prion-like events in major neurodegenerative diseases; Proteinopathies; Protein changes in physiological and pathological conditions: Prion protein, alpha-synuclein and Lewy bodies, TDP-43, Beta-amyloid, Tau protein; Alzheimer's Disease; Parkinson's Disease; Creutzfeldt-Jakob Disease, Multiple Sclerosis; Bovine Spongiform Encephalopathy; Drug screening. The course covers all major aspects at the molecular level of neurodegenerative diseases. Students should have a strong background in biochemistry and molecular biology.

**Obiettivi Agenda 2030 per lo sviluppo sostenibile**

This course explores topics closely related to one or more goals of the United Nations 2030 Agenda for Sustainable Development (SDGs). Specifically,
N.3 Health and wellbeing
N.4 Education of quality

English
The Neuropathology course combines core teaching of fundamental aspects of major neuropathological diseases, with emphasis on the cellular and molecular causes of neurodegeneration and their clinical presentation, and on the role of glial cells in neurodegenerative pathologies and disorders of cognition. The course will also address how hypotheses can be tested in relevant model systems and used to develop novel therapeutic strategies. The course contents will be organized in three modules, as follows:

Astroglia Neuropathology, Prof. F. Cesca, 3 CFU
Molecular Neuropathology, Prof. G. Legname, 3 CFU
Clinical Neuropathology, Prof. P. Manganotti, 3 CFU

Aminoff MJ. Neurology and General Medicine, Churchill and Livingstone, 7 Ed.
Favale e Loeb: Neurologia di Fazio - Loeb
Ropper e Brown: Neurology
Angelini-Battistin: Neurologia Clinica
Victor e Adams: Principi di Neurologia
Wilkinson-Lennox: Essential Neurology -Blackwell Publishing

CDs, scientific articles and reviews on specific topics will be provided during classes.
Slides and other material used during lessons will also be provided.

1. KNOWLEDGE AND COMPREHENSION To understanding of fisiopathology and etiopathogenesis of different neurological conditions;
2. KNOWLEDGE AND COMPREHENSION IN applying knowledge and understanding of mechanisms of neurological conditions in a common clinical context
3. CLINICAL CRITICAL JUDGEMENT
Make independent critical judgment in clinical simple context or in single clinical cases in lopedy
4. COMUNICATION SKILLS
Performing good communication skills and acquiring the ability of a correct lexical choice.
5. LEARNING SKILL
Learning skill of automatic procedure (elementary neurological examination) in logopedy.

Are therefore represented the Dublin descriptors for

1. Knowledge and understanding: main brain pathologies starting from basic neurophysiological up to cellular and animal models arriving to clinical context, focusing on both the neuronal and glial contribution to the onset and development of the various diseases;

2. Applying knowledge and understanding: the students should be able to understand and implement experimental strategies in order to investigate specific mechanisms of different pathologies. Autonomous clinical reasoning for simple cases;

3. Making judgments: the students should be able to develop critical capacities to read and understand or criticize scientific papers, to organize and implement strategies to obtain or critically analyze scientific data;

4. Communication skills: students should be able to employ technical language, in order to write with appropriate supervision a scientific paper or organize a scientific oral communication. They will also acquire diagnostic communication skills and the use of vocabulary appropriate to the pathological context and will learn procedural schemes for elementary neurological examinations;
5. Learning skills: students should be able to organize, implement and carry on a scientific knowledge, in order to begin an experiment and with appropriate supervision begin their steps in lab experimental sessions. Basic knowledge in subjects such as chemistry, biochemistry, anatomy and physiology is required.

Frontal lessons and lectures, open discussion, diagnostic videos and tutorials.

The material used during the lessons will be made available through the moodle and/or teams platforms.

Any necessary change in the course modalities due to COVID19 emergency will be published in the Department, Master Programme and course websites.

The final examination will concern open questions on the neurological topics discussed in frontal lessons, giving the opportunity to examine the clinical reasoning abstract capacities of the fellow; we will not proceed with preliminary or intercurrent tests; the final examination will be an oral exam, with a final score expressed /30;

The final evaluation will consist in:

- Excellent (30 and 30 with laude): optimal knowledge of the topics and optimal language and interpretation, optimal analytic capacity; the student is able to correctly apply the knowledge in clinical cases.

- Very good (27 - 29): good knowledge of the topics, good language, good analytic capacity; able to apply the theory to the practice.

- Good (24-26): good knowledge of the topics, appropriate language, sufficient capacity to apply the concepts to the clinical practice.

- More than Sufficient (21 - 23): the students is not completely expert on the topic, although he knows the fundamental theoretical concepts

- Sufficient (18-20): minimal knowledge of the topic and limited capacity to apply it to clinical cases.

- Insufficient: the student is not able to discuss the fundamentals of the topic in different chapters of program

Astroglial Neuropathology (Prof. F. Cesca):

Molecular Neuropathology (prof. G. Legname): Molecular mechanisms in neurodegeneration; Prion diseases; Prion-like events in major
neurodegenerative diseases; Proteinopathies; Protein changes in physiological and pathological conditions: Prion protein, alpha-synuclein and Lewy bodies, TDP-43, Beta-amyloid, Tau protein; Alzheimer's Disease; Parkinson's Disease; Creutzfeldt-Jakob Disease, Multiple Sclerosis; Bovine Spongiform Encephalopathy; Drug screening. The course covers all major aspects at the molecular level of neurodegenerative diseases. Students should have a strong background in biochemistry and molecular biology.

This course explores topics closely related to one or more goals of the United Nations 2030 Agenda for Sustainable Development (SDGs). Specifically,
