Docente **LODOVICHİ CLAUDIA, 3 CFU**

---

Anno offerta: **2023/2024**

Insegnamento: **986SV - NEUROPHYSIOLOGY OF SENSORY SYSTEMS**

Corso di studio: **SM75 - NEUROSCIENCE**

Anno regolamento: **2023**

CFU: **3**

Settore: **BIO/09**

Tipo Attività: **D - A scelta dello studente**

Anno corso: **1**

Periodo: **Primo Semestre**

Sede: **TRIESTE**

## Testi in italiano

**Lingua insegnamento** English

### Contenuti (Dipl.Sup.)

The course analyses the neurophysiological mechanisms underlying sensory perception.

We will study the general principles instructing sensory systems and we will analyze in depth the neurophysiology of a few sensory modalities, such as vision, olfaction and auditory system.

1. Introduction to sensory neurophysiology: principles at the base of sensory coding
2. Anatomy and physiology of the eye and retina
3. From the retina to the thalamus: structure and functions
4. Visual cortex, anatomy and physiology
5. Development and plasticity of the visual system
6. Anatomy and physiology of the ear
7. The auditory central nervous system
8. Representation of sounds from the cochlea to higher brain areas
9. Odors and olfaction: a sensory modality and not only
10. Olfactory epithelium: anatomy and physiology
11. The olfactory bulb: the first center where olfactory information is processed
12. Development and function of olfactory maps
13. From the olfactory bulb to higher olfactory brain areas
14. The olfactory bulb as a hub
15. When sensory systems get involved in pathology

The topics will be integrated with recent papers related to the subjects treated.

<b>Testi di riferimento</b>	Kandel et al. Principle of neural sciences Purves et al. Neurosciences Look for the latest editions.
<b>Obiettivi formativi</b>	Acquire knowledge in the mechanism underlying sensory neurophysiology as a way to understand how the brain works and exploit sensory information to make sense of the world and guide distinct behaviour.
<b>Prerequisiti</b>	Knowledge of anatomy and neurophysiology of the neurons.
<b>Metodi didattici</b>	The course foresees frontal lectures and class discussions
<b>Altre informazioni</b>	Any changes, necessary to ensure the application of the safety protocols related to the COVID19 emergency, will be communicated on the Course website.
<b>Modalità di verifica dell'apprendimento</b>	Written exam with multiple choice questions and eventually open questions that require a brief answer.
