## Testi in inglese

|                       |  |
|-----------------------|--|
| Lingua insegnamento   | English  |
| Contenuti (Dipl.Sup.) | <p>Overview about neuro-oncology (history of neuro-oncology), neuro-anatomy, epidemiology, tumor grading, tumor classification (WHO), introduction to molecular neuro-oncology, critical thinking in neuro-oncology.</p> <p>Overview on meningeal development and anatomy; meninges histology, histopathology; tumor subtypes, grading, treatment options, molecular features/subgroups, prognosis.</p> <p>Overview on hemangiopericytomas; cell of origin, histology, histopathology, grading, treatment options, molecular features, prognosis (see for instance: Armulik et al. Pericytes: Developmental, Physiological, and Pathological Perspectives, Problems, and Promises. Dev Cell 2011)</p> <p>Glial cell subtypes, pilocytic astrocytoma (WHO I), neurofibromatosis type I (and NF1 gene/protein), diffuse astrocytoma (WHO II), oligodendroglioma (WHO II), differences between astro- and oligodendroglioma, significance of MGMT - TP53 - 1p19q LOH - IDH, anaplastic gliomas (WHO III). See for instance Eckel-Passow et al. Glioma Groups Based on 1p/19q, IDH, and TERT Promoter Mutations in Tumors. NEJM 2015; The Cancer Genome Atlas Research Network. Comprehensive, Integrative Genomic Analysis of Diffuse Lower-Grade Gliomas. NEJM 2015; Kelderman et al. Cancer Cell 2015; Ramaswamy and Taylor. Cancer Cell 2015.</p> <p>Levels of evidence and clinical trials.</p> <p>Epidemiology, histopathology, imaging, current standard of treatment, median survival, definition of tumor progression and recurrence, definition of tumor cell, oncogenes vs. oncosuppressors, RTK - p53 - RB pathways in glioblastoma, hallmarks of cancer and therapeutic targets in glioblastoma, patients' stratification in clinical trials, new trends towards a better glioma histopatological/molecular/genetic classification.</p> |

Hypothesis behind glioblastoma malignant behaviour, cancer stem cell hypothesis and its origins, from liquid to solid tumors, key-papers from Dick - Dirks - Weiss - Galli, tumor heterogeneity vs hierarchy, definition of GSC, pitfalls of this hypothesis. Evolution of the glioma stem-like cell hypothesis.

Extra: how to give a good talk in science. Practical and theoretical examples of DOs and DONTs when you have to prepare and deliver a scientific presentation in front of an audience. This lesson is part of the program, since a part of the final examination will deal with that.

See for instance: Alon, U. (2009) Molecular Cell 36, 165–167.

History of viral therapy for GBM, viral vectors for GBM, HSV-1 for GBM, hypoxia-GBM-viral therapy, bovine viral vectors for GBM.

Definition of translational research, overview on GBM in vitro and in vivo models, serum vs serum-free GBM cell cultures, in vivo models (chemically induced, mutation driven - transgenic models, isograft vs xenograft), virus mediated gene delivery for GBM.

Emerging Concepts in Neuro-Oncology (2013)  
Colin Watts (Editor)  
Publisher: Springer; 2013 edition (November 9, 2012)  
ISBN-10: 0857294571  
ISBN-13: 978-0857294579

Lecture slides (provided by the teacher) along with some key papers (cited in the slides).

## Obiettivi formativi

To understand the basic principles of neuro-oncology, with special regard to the genetic and molecular mechanisms involved.

## Prerequisiti

None

## Metodi didattici

Frontal lessons

## Altre informazioni

For any doubt or for additional information:  
perin.a@istituto-besta.it  
dsgubin@gmail.com

## Modalità di verifica dell'apprendimento

Oral examination. Students will be given max 3min to answer each of the two questions. No feedback will be provided. Questions and answers might be tape recorded.

## Programma esteso

Overview about neuro-oncology (history of neuro-oncology), neuro-anatomy, epidemiology, tumor grading, tumor classification (WHO), introduction to molecular neuro-oncology, critical thinking in neuro-oncology.

Overview on meningeal development and anatomy; meninges histology, histopathology; tumor subtypes, grading, treatment options, molecular features/subgroups, prognosis.

Overview on hemangiopericytomas; cell of origin, histology, histopathology, grading, treatment options, molecular features, prognosis (see for instance: Armulik et al. Pericytes: Developmental, Physiological, and Pathological Perspectives, Problems, and Promises. Dev Cell 2011)

Glial cell subtypes, pilocytic astrocytoma (WHO I), neurofibromatosis type I (and NF1 gene/protein), diffuse astrocytoma (WHO II), oligodendroglioma (WHO II), differences between astro- and oligodendroglioma, significance of

MGMT - TP53 - 1p19q LOH - IDH, anaplastic gliomas (WHO III). See for instance Eckel-Passow et al. Glioma Groups Based on 1p/19q, IDH, and TERT Promoter Mutations in Tumors. NEJM 2015; The Cancer Genome Atlas Research Network. Comprehensive, Integrative Genomic Analysis of Diffuse Lower-Grade Gliomas. NEJM 2015; Kelderman et al. Cancer Cell 2015; Ramaswamy and Taylor. Cancer Cell 2015.

Levels of evidence and clinical trials.

Epidemiology, histopathology, imaging, current standard of treatment, median survival, definition of tumor progression and recurrence, definition of tumor cell, oncogenes vs. oncosuppressors, RTK - p53 - RB pathways in glioblastoma, hallmarks of cancer and therapeutic targets in glioblastoma, patients' stratification in clinical trials, new trends towards a better glioma histopathological/molecular/genetic classification.

Hypothesis behind glioblastoma malignant behaviour, cancer stem cell hypothesis and its origins, from liquid to solid tumors, key-papers from Dick - Dirks - Weiss - Galli, tumor heterogeneity vs hierarchy, definition of GSC, pitfalls of this hypothesis. Evolution of the glioma stem-like cell hypothesis.

Extra: how to give a good talk in science. Practical and theoretical examples of DOs and DONTs when you have to prepare and deliver a scientific presentation in front of an audience. This lesson is part of the program, since a part of the final examination will deal with that.
